

NETFLIX DATA ANALYSIS

Power BI Dashboard

Project Overview

The Netflix Dashboard is designed in Power BI to analyze content, customer viewing behavior, ratings, genres, countries, subscription types, watch time, and director performance. It uses interactive slicers and navigation buttons across four analytical pages.

Objectives

- Analyze Netflix content by genre and type.
- Measure customer ratings and average ratings.
- Compare country-level viewer activity and ratings.
- Evaluate director-level rating and performance.
- Provide an interactive dashboard for business decision-making
- Understand watch-time patterns across age groups, countries, and subscription types

1 – GENRE & TYPE OF NETFLIX

A high-level view of Netflix content by genre, type, rating, and subscription category.

Key KPI Cards

- Total Genre: 10
- Total Ratings: 60K
- Total Types: 20K

Visuals & Filters

- Overall Rating by Genre – column chart showing the total rating count for each genre.
- Overall Average of Rating by Genre – treemap comparing average ratings across genres.
- Average Rating by Content – pie chart comparing average rating for content categories.
- Type slicer – Movie and TV Show.
- Subscription_type slicer – Basic, Premium, and Standard.
- Count of Genre by Month – area chart showing monthly genre counts.
- Overall Rating by Genre & Quarter – column/area-style visual for rating trends by genre and quarter.
- Genre slicer – Action, Animation, Comedy, Documentary, Drama, Fantasy, Horror, Romance, Sci-Fi, Thriller.
- Navigation buttons – Genre and Type & Subscription Type.

Key Insights

- Drama, Fantasy, Horror, Romance, and Sci-Fi show broadly similar high rating volumes.
- The genre treemap shows average ratings clustered around approximately 3.0, with Action and Drama slightly above 3.0.
- Monthly genre counts fluctuate, with visible peaks around March, August, October, and December.

NETFLIX DATA ANALYSIS

Power BI Dashboard

- The Type and Subscription slicers allow the user to compare audience behavior across content and plans

2 – COUNTRIES & WATCH TIME CUSTOMERS

This Heading focuses on viewing time, customers, countries, age groups, subscriptions, and director-level performance.

Key KPI Cards

- Total Watch Time: 50M
- Total Customer: 20K
- Total Country: 10

Visuals & Filters

- Total Watch Time by Age Wise Category – bar chart comparing viewing time across age groups.
- Total Watch Time by Subscription_Type – comparison of watch time for Standard, Basic, and Premium.
- Total Watch Time & Rating by Country – combined chart comparing watch time and rating.
- Country slicer – Australia, Brazil, Canada, France, Germany, India, Japan, South Korea, UK, USA.
- Overall Average of Rating by Director – horizontal bar chart ranking directors by average rating.
- Overall Rating by Director – column chart showing director-level rating totals.
- Navigation buttons – Countries Analysis and Total Watch Time & Director.

Key Insights

- The 60+ age group contributes the highest watch time at about 15.4M.
- The 30–44 and 45–59 groups contribute about 11.2M and 11.0M respectively.
- Standard and Basic subscriptions contribute approximately 17M watch time each, while Premium is slightly lower at about 16M.
- Country watch time is close to 5M for most countries, while ratings vary more noticeably.
- Christopher Smith has the highest displayed average director rating at about 4.25.

3 – COUNTRIES ANALYSIS

This detailed country page is reached through the Countries Analysis navigation button. It is intended to isolate country-level performance and customer distribution.

Key KPI Cards

- Country Count: 10
- Primary Measures: Rating, Watch Time, Viewers

NETFLIX DATA ANALYSIS

Power BI Dashboard

Visuals & Filters

- Overall Average Rating by Country – horizontal comparison of average ratings.
- Overall Rating by Country – country-level rating distribution/comparison.
- Total Watch Time & Rating by Country – combined watch-time and rating analysis.
- Count of Subscription Type by Country – stacked comparison of Basic, Premium, and Standard customers.
- Total Number Viewers by Country and Genre – map visual displaying geographic viewer concentration.
- Country slicer for interactive country filtering.

Key Insights

- The country visuals make it easy to identify markets with stronger watch-time and rating performance.
- The subscription chart supports comparison of plan mix across countries.
- The map provides a geographic view of viewer distribution and can help identify priority markets.
- Country filtering can be used to drill into a single market and evaluate its subscription and viewing behavior.

4 – TOTAL WATCH TIME & DIRECTOR

This page is reached through the Total Watch Time & Director navigation button and is designed for deeper engagement and creator-performance analysis.

Visuals & Filters

- Watch Time by Age Category – identifies the age groups contributing the most viewing minutes.
- Watch Time by Subscription Type – compares engagement between Basic, Premium, and Standard plans.
- Watch Time and Rating by Country – identifies markets combining strong engagement and rating performance.
- Average Rating by Director – ranks directors based on their average audience rating.
- Overall Rating by Director – compares total ratings attributed to each director.
- Country and subscription filters can be used to investigate specific segments.

Key Insights

- Use watch time as the primary engagement KPI when evaluating audience behavior.
- Compare subscription plans to identify which customer groups generate the greatest viewing activity.
- Use average director rating together with total rating count so that quality is not evaluated from average rating alone.
- The page supports content acquisition, recommendation, and creator-performance decisions.

Power BI Dashboard

5. Business Recommendations

- Prioritize high-watch-time age groups with targeted content and personalized recommendations.
- Compare subscription engagement and consider retention campaigns for plans with lower viewing activity.
- Use country-level results to identify high-potential markets for localized content.
- Promote high-performing genres while maintaining a balanced content portfolio.
- Evaluate directors using both average rating and total rating volume.
- Use dashboard slicers during business reviews to move from overall performance to specific customer segments.

6. Conclusion

The four-page Netflix Power BI dashboard provides an interactive analytical solution for understanding content performance, customer engagement, country behavior, subscription patterns, and director performance
